## → HYPERBARIC OXYGEN THERAPY (HBOT)

**HBOT** involves breathing concentrated oxygen in a pressurized chamber to increase oxygen levels in the blood. This elevated oxygen supply enhances tissue repair and regeneration, reduces inflammation, increases circulation, and assists in the healing of chronic diseases. Additionally, HBOT is effective in treating decompression sickness and carbon monoxide poisoning, making it a versatile treatment for various medical conditions. An initial course of 20–60 hours is recommended, followed by monthly 60-minute maintenance sessions (dependent on patient and target treatment). Best outcomes are achieved by one session per week for 40 weeks, five sessions per week for eight weeks, or four sessions daily for two weeks.

### HBOT SESSIONS

30-minute session	\$75
1 hour session	\$100
1.5 hour session	\$120
Bundle of 20 hours	\$1799
Bundle of 40 hours	\$3199

## MEDICATION FEES

Everest Health's Pharmacy Partnership Program leverages exclusive relationships with top-tier pharmacies to provide members with access to essential medications at significantly reduced costs. By negotiating directly with our trusted partners, we secure competitive pricing—offering discounts up to 10x lower than standard retail rates. This ensures our patients receive the highest quality treatments at a fraction of the usual cost, savings that would not be available to them otherwise. Scan the QR code to view exclusive medication rates.

## SKIN, HAIR, AND MUSCULOSKELETAL THERAPIES

### → LIQUIDUM AURUM THERAPY (LAT)

**LIQUIDUM AURUM THERAPY** is scientifically proven to deliver the highest quality of platelet-rich plasma (PRP) therapy. Using a concentrated sample of platelets derived from the patient's blood, LAT injects plasma rich in growth factors to stimulate healing and tissue regeneration. This advanced PRP therapy promotes cellular repair, enhances skin elasticity, and potentially slows aging by boosting the body's natural repair mechanisms, helping maintain a youthful appearance and support overall vitality.

### → COLLAGEN INDUCTION THERAPY (CIT)

**COLLAGEN INDUCTION THERAPY**, also known as microneedling, involves using fine needles to create tiny punctures in the skin, stimulating collagen production. Benefits include improved skin texture, reduced scars, minimized fine lines, and enhanced skin elasticity.

### → FRAXEL® DUAL LASER

**THE FRAXEL® DUAL LASER** is a skin resurfacing treatment that uses two types of laser technology to target both the surface and deeper layers of the skin. It effectively addresses a range of skin issues, including wrinkles, age spots, and acne scars, by stimulating collagen production and promoting cell turnover. The benefits of Fraxel® Dual Laser treatments include improved skin texture, reduced pigmentation, and a more youthful, radiant complexion with minimal downtime. Best outcomes are achieved with an initial course of 4-6 treatments every two weeks, followed by 1-2 maintenance treatments per year.

### → DAXXIFY INJECTIONS

**DAXXIFY** is a state-of-the-art neuromodulator injection designed to smooth wrinkles and fine lines by targeting the facial muscles responsible for expression lines. Daxxify uses a unique formulation to deliver longer-lasting results than traditional wrinkle relaxers, giving patients a refreshed, youthful appearance with effects that can last up to six months. This advanced treatment is ideal for reducing frown lines, forehead wrinkles, and crow's feet, offering a reliable, non-surgical solution for a smoother skin texture and luminosity.

LAT + CIT are recommended as a combined service to enhance skin rejuvenation, maximizing the benefits of both treatments for optimal healing and results.

#### LAT INJECTIONS KNEE, SHOULDER OR TRIGGER POINT
